

ALUMINUM ROD

After establishing itself as Nepal's leading manufacturer of wires, cables, and conductors, Litmus Industries is now expanding into aluminium rod manufacturing. Committed to quality, innovation, and sustainability, Litmus Aluminium Rod is designed for superior conductivity, strength, and reliability. Manufactured with high-purity aluminium and advanced technology, it meets international standards, making it ideal for electrical transmission, distribution, and industrial applications. This expansion reinforces Litmus's mission to drive Nepal's industrial growth while ensuring a sustainable and self-reliant future.

Specifications for EC 1350 (H12, H14 and 0 Temper)
Size available: 7.6mm, 9.5mm, and 12mm

MANUFACTURING PROCESS

Aluminum Rod

Aluminum Wire Rods – Engineered for Excellence in Electrical Conductivity, Strength & Versatile Applications High-quality aluminum and alloy wire rods designed to meet diverse performance needs—from standard EC-grade to high-strength and specialty alloys. Suitable for power transmission, overhead conductors, cable sheathing, and industrial applications, ensuring optimal mechanical properties, conductivity, and processing compatibility

Aluminum & Alloy Wire Rods –High Conductivity Superior Strength | Versatile Applications

EC | T4 | AL-59 | 8176

EC Grade – Low UTS "O" Temper			
Property	Unit	Min	Max

PACKING

The coil shall be supplied with following dimension:

Inner diameter	Outer diameter	Height
Approximately 550mm	1500mm maximum	850mm to 950mm

The nominal weight for each coil approximately $2000 \pm 200\text{kg}$.

Each coil shall be securely strapped to a timber pallet. The pallet shall be dry or free from moisture to prevent insect or fungal attack.

Adequate protection shall be provided to prevent corrosion or physical damage to the coil. Each coil shall be wrapped with a blank polyethylene in order to be protected from damage and prevent contamination to the rods surface which might cause from the environment.

FINISHING & APPEARANCE

The Aluminium Rod is supplied in the form of a continuous coil without any joints. The Rod shall be clean, without any excessive oil & grease, of uniform lustre, smooth and free from flakes, cracks, kinks, dents, twists, and other injury or defects.

TECHNICAL SPECIFICATION

Aluminum Designation	Temper	Diameter	Tensile Strength (Mpa)		Elongation (%)		Conductivity	Standard
			Min	Max	Min	Max		
1350	O	9.50 MM +/-0.51 MM	90	100	14.0		61.8	IS 5484/ ASTM B-233
	H12	12.70 MM +/- 0.51 MM	101	110	8.0		61.5	
	H14		111	138	6.0		61.4
